

Table of Contents for "The Geometry of Stock Market Profits"

**Table of Contents**

Biographical Sketch ..... i

Acknowledgements ..... ii

Preface ..... iii

Chapter 1 - Introduction to Cycles ..... 1

Chapter 2 - Why Technical Analysis? ..... 4

Chapter 3 - Charts ..... 11

Chapter 4 - Theory of Geometry ..... 14

Chapter 5 - The Hourly Chart ..... 26

Chapter 6 - Proportion and Harmony ..... 36

Chapter 7 - Trading Basics ..... 40

Chapter 8 - Impulse Waves ..... 50

Chapter 9 - Trading Options ..... 55

Chapter 10 - Cycles ..... 72

Chapter 11 - What is a Professional? ..... 81

Chapter 12 - Professional Trading ..... 86

Chapter 13 - Common Sense Trading Rules ..... 90

Chapter 14 - Ten Trading Tips to make you Rich ..... 98

Chapter 15 - Comments on Fundamentals and Economics ..... 110

Epilogue ..... 112

Appendix - Trader's Check List ..... 113

Trader's Daily Worksheet ..... 114

Exhibits ..... 115

Figure 1

The above chart of Burroughs Corporation from 1985 shows a top cycle of 66 days spinning out from a high of 66 1/8.

Also shown are very small top cycles at 66 hours from that first top. The lower half shows low cycles of 55 days being spun out from the low of 54 7/8.

Geometry book- demonstrating how the price itself spins out time period harmonics of that price. Here we see 66 hours and days for highs and 55 days for lows and a big breakdown gap when both come together.

Geo book- showing hand drawn hourly charts with Fibonacci hour expansions to pin point turns.

Figure 8

**TRADING WITH ANGLES**

- 1- Angles are types of **moving averages** and tell you much more about **sentiment** and **true market power** than any oscillator or percentage bands.
- 2- They evenly divide time and price with space movements - thus you can **forecast future price levels** at time periods commensurate with the slope of the impulse angle.
- 3- When you **break** an angle you will **always drop to the next angle down** or go sideways until it catches up with you.

Geo book- shows how to spot "Mirror Image Foldback" patterns

"The Geometry of Stock Market Profits A Guide To Professional Trading For a Living" was my first book and covers the whole range of techniques and psychology that the professional trader needs. The book covers many basic as well as very advanced technical techniques as well as giving a great many common sense trading rules that will make you real money. This is a classic but I urge you to read this in conjunction with the "Chart Reading" book which takes these first principles and greatly elaborates on them. This first Geometry book so impressed one very successful Wall Street trader that he purchased 50 copies and insisted that every trader who worked with him read the book.
